Packing for <i>INDION</i> ® R	lesins					
Moist Resins		Dry Resins				
HDPE liner bags	25 / 50 lts	Dry Beads				
LDPE liner bags	0.5 cft / 1 cft / 25 lts	HDPE carbouys with				
Super sack	1000 lts / 35 cft	inner double plastic liner bags	25 / 50 kgs			
MS drums with liner bags	180 lts	·	_			
Fibre drums with liner bags	7 cft	Dry Powders				
PVC jars with liner bags	5 / 6 lts	HDPE carbouys with				
HDPE drums with liner bags	50 / 100 / 180 lts	inner double plastic liner bags	6 / 20 / 40 kgs			
Vaccum packing with LDPE bags	1 cft / 25 lts					

#### Protection of Ion Exchange Resins during Storage

Ion exchange resins, supplied in dry or moist condition, require proper care at all times. Always keep the resins drums / bags closed and in shade at a temprature between 10°C and 40°C.

Moist Resins: Resins which are supplied in moist condition should not be allowed to dry. Regularly open the drums / bags and check the condition of the resins. If the resin is not moist enough, add demineralised water to keep it in completely moist condition.

Dry Resins: Resins which are supplied as dry beads or dry powders should not be allowed to come in contact with moisture.

### Measurement

Moist Resins: All water treatment resins and resins supplied in moist condition are generally sold on volume basis. The volume is measured in a column after backwashing, settling and draining of water to the bed surface. Dry Resins: All dry resins are sold on weight basis

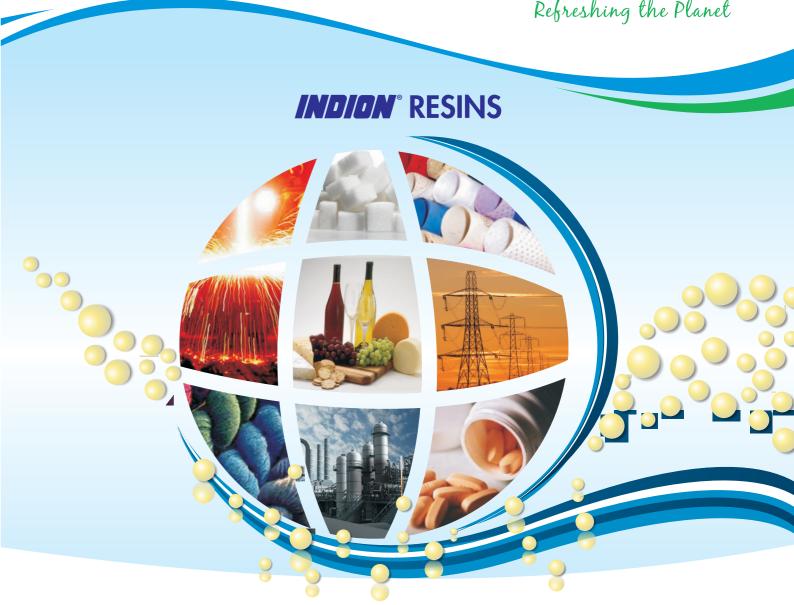

#### Warning

Strong oxidising agents such as nitric acid, degrade ion exchange resins to a considerable extent. This may result in an explosive reaction. Thus, before using strong oxidising agents, consult sources knowledgeable in handling of such material.

#### Our state-of-the-art manufacturing facilities are ISO 9001, ISO 14001 & ISO 45001 certified

To the best of our knowledge the information contained in this publication is accurate. Ion Exchange (India) Ltd. maintains a policy of continuous development and reserves the right to amend the information given herein without notice. Please contact our regional / branch offices for current product specifications.

**INDION** is the registered trademark of Ion Exchange (India) Ltd.

# **The Preferred Choice**

Our INDION range is backed by sustained focus on customer needs, intensive product and application R&D, sound technical support and wide application knowhow. Add to this continuous innovation, worldclass quality, state-of-the-art ISO 9001 &14001 certified facilities, an FDA approved pharmaceutical grade resin manufacturing unit...and you get the perfect recipe that makes INDION the preferred choice across sectors for over five decades.

# Wide Range. Extensive Applications.

A complete range of cation & anion resins for water and waste water treatment as well as a host of speciality applications - pharmaceutical excipients, catalysts, nuclear grade resins, chelating resins for brine softening and heavy metal removal, adsorbent grade resins, resins for removal of colour, odour, organics, nitrate & tannin, resins for purification of bio-diesel, sugar, food & beverages and many more...

## Applications

neralisation in co-current and countercurrent mode. ensate polishing & caprolactum purification.

um grade cation exchange resin for water softening.

um grade cation exchange resin for demineralisation.

neralisation in co-current and countercurrent mode.

n mixed bed.

neralisation in co-current and countercurrent mode.

neralisation in co-current and countercurrent mode. nsate polishing & caprolactum purification.

Im grade anion exchange resin used for eralisation in regenerable mixed bed application.

eralisation in co-current and countercurrent mode.

neralisation in co-current and countercurrent mode.

Im grade anion exchange resin for demineralisation in rent and countercurrent mode.

n condensate polishing unit.

val of organics & colour from water.

eralisation in co-current and countercurrent mode.

um grade anion exchange resin for demineralisation in rrent and countercurrent mode.

val of strong acids from water.

ard grade cation exchange resin for water softening.

um grade cation exchange resin for water softening.

Im grade cation exchange resin for demineralisation enerable mixed bed application.

um grade cation exchange resin for demineralisation.

## Applications

Im grade cation exchange resin for water softening.

l grade cation exchanger for use in layered bed and ked bed condensate polishing.

Im grade cation exchange resin for water softening.

treatment of foodstuffs, beverages, potable water and used in the processing of food. This product conforms / ANSI / CAN 61, NSF / ANSI 372 & is certified with SEAL from WQA.

treatment of foodstuffs, beverages, potable water and used in the processing of food. This product conforms / ANSI / CAN 61, NSF / ANSI 44 & is certified with SEAL from WQA.

t free cation – in the treatment of foodstuffs, beverages, e water and water used in the processing of food.

r indicating resin. Colour changes at the time austion.

ery of metals from aqueous and non-aqueous streams.

eralisation in co-current, countercurrent mode and nsate water treatment.

n condensate polishing unit.

al of alkaline hardness from water.

al of alkaline hardness from water.

regenerated mixture of cation and anion for producing ure water.

lume ratio of cation in H<sup>+</sup> and anion in OH<sup>-</sup> to ce high purity demineralised water.

egenerable mixed bed application where highest quality s required. Colour changes at the time of exhaustion.

vichiometrically equivalent volume ratio of cation in H<sup>+</sup> nion in OH<sup>-</sup> to produce high purity demineralised

volume ratio of cation and anion to produce high demineralised water.

egenerable EDM application.

ction of high purity water in electronic & pharma ry.

noval from steam condensate of petroleum refineries, eum products & water contaminated with hydrocarbon.

### Applications

ection of potable water.

val of Arsenic from potable water. This product conforms -/ ANSI / CAN 61 & is certified with GOLD SEAL VQA.

val of dissolved Iron from water. This product conforms F / ANSI / CAN 61 & is certified with GOLD SEAL WQA.

al of fluoride from water.

ve removal of perchlorate from ground water.

ourity food grade resin for treatment of potable water od stuff. This product conforms to NSF / ANSI / CAN 61, ANSI 372 & is certified with GOLD SEAL from WQA.

purity CPS food grade resin for treatment of potable & food stuff.

softening application. This product conforms to NSF / / CAN 61 & is certified with GOLD SEAL from WQA. oduct is manufactured by a non solvent process.

al of alkaline hardness from water.

ve removal of Nitrates from water. This product rms to NSF / ANSI / CAN 61 & is certified with 9 SEAL from WQA.

al of halogens and oxidising agents.

purity ion exchange resin (in hydrogen form) for use lear power plants.

purity CPS ion exchange resin (in hydrogen form) for nuclear power plants.

purity ion exchange resin (in lithium form) for use in ir power plants.

ery of Uranium from leach liquors.

trength strong base anion resin (Type I) for use in ir power plants.

## Applications

n strength CPS strong base anion resin (Type I) for use in ear power plants.

gen scavenging.

volume mixture of cation and anion to produce high ty alkaline water for use in nuclear power plants. volume mixture of cation and anion. Used in nuclear

er plants.

alyst for organic reactions like esterification etc.

alyst grade resin for esterification and alkylation tions.

nium catalyst for specialised applications such as rification, alkylation etc.

alyst for manufacture of butyl acetate, ethylacetate, n hydration & bisphenol A.

atalyst in aldolization reactions.

ctive adsorption of bivalent mercury from industrial pents.

ctive recovery of mercury and precious metals.

alcification of secondary brine in chloralkali industry.

action and recovery of metals, removal of heavy metals n various organic or inorganic chemical products.

overy of metals from aqueous and non-aqueous streams.

SAC: Strong Acid Cation, SBA: Strong Base Anion, WBA: Weak Base Anion, WAC: Weak Acid Cation, SPL : Speciality

11

## Applications

val and recovery from process streams.

val of high level of colour bodies from sugar syrup.

val of colour bodies from sugar syrup and other process ns. This product conforms to NSF / ANSI / CAN 61 ertified with GOLD SEAL from WQA.

val of high level of colour bodies from sugar syrup.

nent of non-aqueous solution such as deashing of se, dextrose, sorbitol, gelatin & purification of MSG.

nent of non-aqueous solution such as deashing of se, dextrose, sorbitol, gelatin & purification of MSG.

idification of process streams.

removal from textile effluent.

val of strong acids in non water, pharma & speciality cations.

al grade cation exchanger for applications demanding r oxidation stability such as gelatin purification, metal removal etc.

for the uptake of toxic / undesirable heavy metals, prary hardness from process liquor and industrial water.

val of alkaline hardness from water in Beverage Industry.

ally developed mix of resins for use in electroplating stations. Colour changes at the time of exhaustion.

\*\* sodium glycocholate exchange capacity

## Applications

masking of bitter drugs such as Norfloxacin, Ofloxacin, romycin, Dicyclomine Hydrochloride, Famotidine and abilisation etc.

masking of bitter drugs such as Ciprofloxacin, roquine Phosphate etc. as well as tablet disintegration.

ined release agent in drug formulations.

t disintegrant/taste masking. Product meets specifications acrilin Potassium, USP.

ment of Hyperkalaemia.

estyramine resin – used for lowering serum cholesterol Taste masking, drug stabilisation, controlled release & ingredient.

ine taste masking and sustained release.

For more information visit us at : www.ionresins.com

We offer several other speciality resins for a wide variety of applications. These include fine mesh resins for chromatographic separations; dessicant grade resins for moisture removal from sovlents & resins for peptide synthesis.

## Applications

cation of Aloe Vera juice and Methi extract.

surface area polymers for recovering non-polar ances from aqueous and non aqueous streams.

I removal from HCI and effluent.

surface area polymers for recovering non-polar ances from aqueous and non aqueous streams.

ication of FFA.

cation of raw bio-diesel to remove residual FFA from 1.0% to less than 0.1%.

cation of raw bio-diesel for removal of glycerine, moisture etc.
